Our company is organised and committed to seek continuous improvements at every level.

Innovation and our ability to support our customers with dedicated solutions allow us to be the ideal partner for companies looking for high levels of quality and service.

Our technical catalogues illustrate the standard range of products manufactured. In addition our product portfolio also includes a wide and diverse range of custom products designed to satisfy the specific technical requirements of our customers. This characteristic is demonstrated by our focus on the products technical development, by the use of innovative injection moulding techniques and materials and in the design of the products dedicated electrical features.

Our commitment to innovation in terms of organisation, the traceability of all of the various processes together with our ability and desire to constantly support our customers from the products conception and throughout its complete lifetime allows our company to cooperate Internationally with market leading organisations in the following market sectors:

- AGRICULTURE ● FORESTRY ● FARMING
- AIR ● WATER ● FLUID ● STEAM ● GAS
- AUTOMOTIVE
- CONSTRUCTION ● EARTHMOVING
- ENERGY ● PETROCHEMICAL
- Food ● BEVERAGE ● VENDING
- INDUSTRIAL AUTOMATION ● ROBOTICS
- MARINE ● PORTS
- MINING ● QUARRYING ● CEMENT MIXING
- PACKAGING ● BOTTLING
- POWER TRANSMISSION ● HYDRAULICS ● PNEUMATICS
- TRANSPORT ● SERVICES
- TRANSFER MACHINES ● ASSEMBLY

The drawings and the technical data reported on the data sheets have been checked and are believed to be correct. However no liability is accepted therefore.

We always recommend to contact our technical department for the most significant values. The company reserves the right to modify what is reported on specifications and drawings without notice due to technical or commercial reasons.

All technical data contained in this catalogue considers that our connectors are being used as connecting devices which in normal use (when under load) should not be inserted or withdrawn from any mating device.

With reference to CE marking, it should be noted that electronic components such as connectors are not subject to any form of marking and therefore must not be marked with a CE mark. This is confirmed within the conditions of the European Commission for Low Voltage and EMC guidelines.

Our connectors are developed and designed for the use in the field of equipment, control and electrical appliances. They can also be used in other applications under the responsibility of the user.

Any connecting wires should be stripped only so far that distances to conductive parts are not shortened.

When wires are crimped or soldered care should be taken to ensure that no single strands are exposed in order to prevent a short circuit.

**Atam Group. Innovation and technology.**

Since 1992 Atam Group produces components for the automatic regulation and, more in general, for the wide market of industrial automation and engineering oil hydraulic.

The group was born with the common intention to diversify strategies and researches with the purpose of completely satisfy the customer.

The continuous technological evolution, oriented to anticipate the market demands and the competition, allows Atam Group to be an active and trusted partner in order to grant the maximum performances of each product.

Glossary

Glossary

Ampère (A): International unit of measurement of the intensity of electric current.

Alternate current (AC): Electrical current flow, variable in time, both as intensity that direction. Reaches a maximum positive value and a maximum negative value passing from zero.

Direct current (DC): Flow of electrical current, constant in time, both in intensity as that direction.

Ground connection (PE): Point of connection of the electric masses intended to be connected physically to the earth. The correct operation avoids the risk of electric shock.

Diode Non-linear passive electronic component, whose function is to allow the passage of current flow in one direction only and lock it in the opposite direction.

Ohm (Ω): International unit of electrical resistance.

Current rectifier: It is a device consisting of diodes, capable of converting an AC voltage into a DC voltage.

Electrical resistance: Capacity of a conductor to oppose the passage of electric current generating heat.

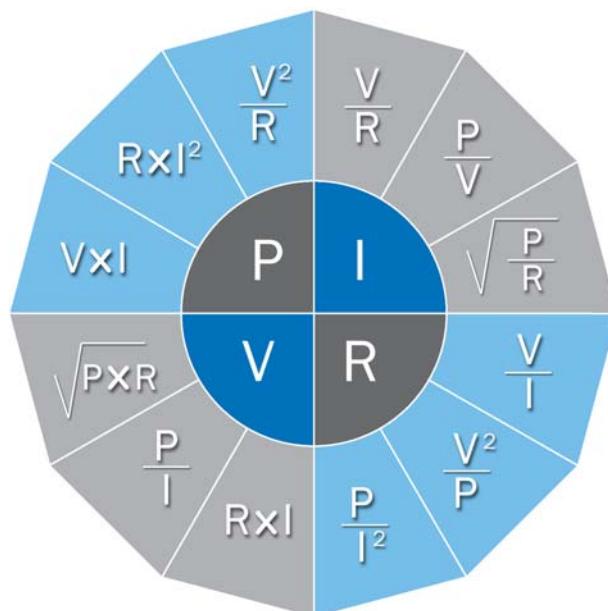

Transil (TVS = Trans Voltage Suppressor): Electrical component belonging to the category of non-linear transient suppressors. Has a behavior similar to a Zener diode, but unlike the latter, serves to protect electronic circuits against overvoltage spikes fast and destructive.

Varistor (VDR = Voltage Dependent resistor): Non-linear electronic component used to protect electronic circuitry from overvoltage spikes fast and destructive. Its behavior can be compared to a resistor (non-linear) that if it is exceeded the voltage for which it is designed, rapidly lowers its internal resistance so that the spike is strongly attenuated.

Volt (V): International unit of electric potential, and also of the potential difference between two points of a conductor or an electric component.

Watt (W): International unit of power.

OHM law and power calculation

V : Voltage Volt (V)
R : Resistance Ohm (Ω)
I : Current intensity Ampere (A)
P : Power Watt (W)

Technical information and references

The connection systems for actuators and sensors must be constructed in according to the standard norms:

EN 175301-803: 2000

EN 61076-2-101: 2003

find their application in low voltage equipment where the reference standard is EN 60730-1 with which the above rules do share some aspects.

As regards the parameters that regulate the insulation coordination of the reference standard is the EN 60664-1.

In matter some definitions here are explained below in briefly:

Rated voltage, Rated current

Are values assigned to a device by the manufacturer and to which to operation

Overvoltage category (EN 60664-1)

A numerical characterizing a transient overvoltage condition:

Category I Equipment for connection to circuits in which measures are taken to limit the overvoltages to an appropriately low level.

Example, electronic circuits, logical and very low voltage

Category II Is an energy consuming equipment to be supplied from the fixed installation. Example, control devices for electrical appliances

Category III Equipment in fixed installation, and for cases where the reliability and the availability of the equipment is subject to special requirements.

Example, components that integrate systems of suppression of transient voltages constituting part of wiring intended to be incorporated in equipment intended for permanent connection.

Category IV Equipment for use at the origin of the installation.

Creepage distances and clearance.

The control devices for low voltage must be constructed in such a way that the distances in the air, the surface and through the solid insulation are capable of withstanding the power that can be provided.

Category of materials (EN 60730-1)

The insulating material used is classified into groups according to comparative index of resistance to tracking index (PTI = Proof Tracking Index)

Material group I

PTI ≤ 600

Material group II

400 ≤ PTI <600

Material group IIIa

PTI ≤ 175 <400

Material group IIIb

100 ≤ PTI <175

This index will determine the minimum creepage distances for the 'basic insulation according to the nominal voltage of the device, and the degree of pollution expected.

Pollution degrees of isolation (EN 60730-1)

The environmental conditions in which the device is to operate must be taken into consideration in order to determine the suitability of the device, to operate properly in such situations. The environmental conditions of pollution are classified in degrees:

Pollution degree 1

No pollution or only dry pollution, non-conductive. The pollution has no effect

Pollution degree 2

Presence of only non-conductive pollution, but which can occasionally become conductive due to condensation planned

Pollution degree 3

Presence of conductive pollution or dry nonconductive pollution that becomes conductive due to condensation planned

Pollution degree 4

The pollution generates persistent conductivity caused by conductive dust, rain or snow.

Our production processes and our products are designed and developed to satisfy the recognized international standards. We also have the technical and production capability to study solutions to other recognized international standards in order to provide products in accordance with our customers specific requirements.

Degree of protection (IP-Code)

Connectors have to be protected for safety reasons from outside influences like dust, foreign objects, direct contact, moisture and water.

This protection is provided on industrial connectors by its housing with their latching devices and sealed cable entries. The degree of protection can be selected depending on the type of intended use.

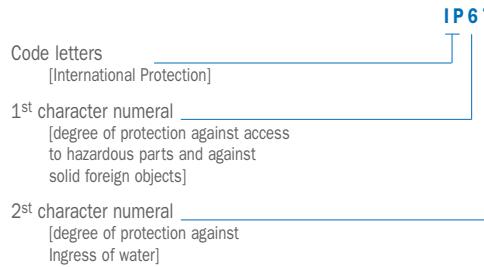

DEGREES OF PROTECTION against ACCESS to hazardous parts indicated by the first characteristic numeral

FIRST characteristic numeral	DEGREE OF PROTECTION	
	Brief Description	Definition
0	Non-protected	
1	Protected against access to hazardous parts with the back of a hand	The access probe sphere of 50 mm Ø shall have adequate clearance from hazardous parts
2	Protected against access to hazardous parts with a finger	The jointed test finger of 12 mm Ø 80 mm length shall have adequate clearance from hazardous parts
3	Protected against access to hazardous parts with a tool	The access probe of 2,5 mm Ø shall not penetrate
4	Protected against access to hazardous parts with a wire	The access probe of 1,0 mm Ø shall not penetrate
5	Protected against access to hazardous parts with a wire	The access probe of 1,0 mm Ø shall not penetrate
6	Protected against access to hazardous parts with a wire	The access probe of 1,0 mm Ø shall not penetrate

DEGREES OF PROTECTION against SOLID foreign objects indicated by the first characteristic numeral

FIRST characteristic numeral	DEGREE OF PROTECTION	
	Brief Description	Definition
0	Non-protected	
1	Protected against solid foreign objects of ≥ 50 mm Ø and greater	To object probe sphere of 50 mm Ø shall not fully penetrate
2	Protected against solid foreign objects of $\geq 12,5$ mm Ø and greater	To object probe sphere of 12,5 mm Ø shall not fully penetrate
3	Protected against solid foreign objects of $\geq 2,5$ mm Ø and greater	To object probe sphere of 2,5 mm Ø shall not fully penetrate
4	Protected against solid foreign objects of $\geq 1,0$ mm Ø and greater	To object probe sphere of 1,0 mm Ø shall not fully penetrate
5	Dust-protected	Ingress of dust is not totally prevented, but dust shall not penetrate in a quantity to interfere with satisfactory operation of the apparatus or to impair safety
6	Dust-tight	No ingress of dust

The standard IEC EN60529 has specified the degree of protection and divided into several classes.

DEGREES OF PROTECTION against WATER indicated by the second characteristic numeral

SECOND characteristic numeral	DEGREE OF PROTECTION	
	Brief Description	Definition
0	Non-protected	
1	Protected against vertically falling water drops	Vertically falling drops shall have no harmful effects
2	Protected against vertically falling water drops when up to 15°	Vertically falling drops shall have no harmful effects when the enclosure is tilted at any angle up to 15° on either side of the vertical
3	Protected against spraying water	Water sprayed at an angle up to 60° on either side of the vertical shall have no harmful effects
4	Protected against splashing water	Water splashed against the enclosure from any direction shall have no harmful effects
5	Protected against water jets	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects
6	Protected against powerful water jets	Water projected in powerful jets against the enclosure from any direction shall have no harmful effects
7	Protected against immersion in water	Ingress of water in quantities the effects of temporary causing harmful effects shall not be possible when the enclosure is temporarily immersed in water under standardized conditions of pressure and time
8	Protected against the effects of continuous immersion in water	Ingress of water in quantities causing harmful effects shall not be possible when the enclosure is continuously immersed in water under conditions which shall be agreed between manufacturer and user but which are more severe than for numeral 7
IP69K in according to DIN40050-9	Protected against the effects due to cleaning with hot water pressure jet	The water jet sprayed against the enclosure, in the conditions of pressure and temperature standardized, have no harmful effects

MOULDED IN CABLE + M12 Y DISTRIBUTOR

Product description	
Standard	IEC 61076-2-101 ; EN175301-803
Construction type	C
Description	M12 Y male distributor and P8 valve connector with moulded cable, integrated gasket and central fixing screw (PE) earth in H6 and H12 position (bridged) function indicator (LED) TVS protective circuit (transil)
Housing colour	M12 = black ; P8 = transparent
Number of contacts	2 + PE / PE bridged
Cable type	PUR/PVC
Conductors specification	0,50 mm ²
Cable length	1 m
Order no.	YC634T54DP11100

Cable type	Atam series	Features	Specifications	Min. bending radius (static application)
PVC IMQ-HAR	A...	Suitable for common applications. Low resistance to common oils	CEI 20-20 UNEL 35746 CENELEC HD21	15 x outer diameter
PVC CEI 2022 II O.R. IMQ CE	C...	Suitable for common applications in industrial automation. Moderate resistance to common oils Flame retardant according to IEC 60332-3A	CEI 20-20 UNEL 35749	10 x outer diameter
BiHFJ (Silicone)	F...	Silicone cables are used in heating appliances outstanding heat and cold resistance. Halogen free (acc. to IEC 60754-1) Flame retardant according to IEC 60332-1 + EN50265-2-1 Flexible at low temperature		4 x outer diameter
PVC	G...	Suitable for control devices, e.g. on machine tools, conveyor or assembly lines, transporting equipments. Suitable for medium mechanical stresses without tensile stress or forced movements but not suitable for open air. Extensively oil resistant Flame retardant according to IEC 60332-1		4 x outer diameter
PVC / UL-CSA	L...	UL listed and CSA certified flexible control cable rated at 600V. Used on machine tools, control systems, assembly lines. Moderate flexible application. Resistant to mineral oils and outer jacket approved to improved oil resistant test.	UL Style 2587 90°C 600V CSA AWM I/II A/B 90°C 600V	4 x outer diameter
PUR / PVC LiY11Y	P...	PUR compound jacketed cable with high resistance to mineral oils especially suited for use in machine tool and heavy environment. Suitable for outdoor and resistant to UV radiation and hydrolysis Conditionally resistant to microbes. Flame retardant according to IEC 60332-1	2002/95/CE	10 x outer diameter
